Technology Research Solutions Vs. Privacy/Security Regulations: Do We Have A Conflict Here?

Speaker: Pierre-Andre La Chance, CIO and Research Privacy Officer,
Center for Health Research, KPNW and KPHI

Background:

Increasing disease prevalence and increasing health care costs demand more complex research with wider collaboration. New technologies are being applied in response to these needs, supporting protocols and data movement in ways previously both unneeded and technically impossible. At the same time an explosion of privacy and security regulations now impose real penalties for compliance failures. This presentation provides a discussion of specific challenges that researchers will need to understand and meet in the very near and real future.
